10.

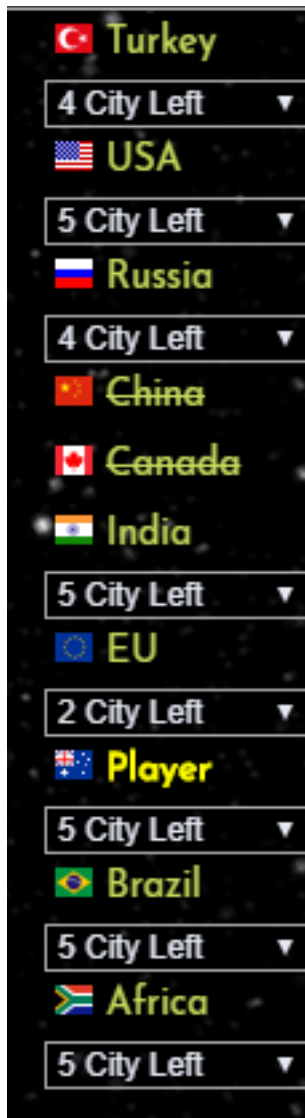

Controls

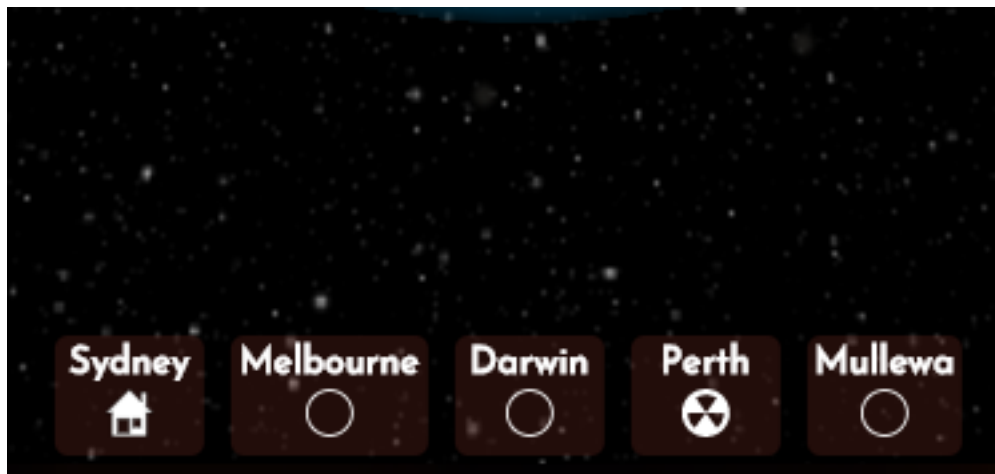

Choosing a city

- You can choose your own or an Enemy city by clicking on its location or from the Country Panel on the top right.

-
-
- Also, you can choose your own cities from the City Panel down below.

-
-

Making a move/ Cancelling

- You can make a move from the Control Panel on the top left after you've chosen a city.

Target : Fortaleza

You should destroy this city if the command center is here

Launch nuclear missile from 0:51

Clear Area It is not your city

Transport to It is not your city

Build missile launcher It is not your city

Build air defense It is not your city

Country :  Brazil (enemy)

Population : 3,401,006

-
-
- You can cancel the moves you made from the monitoring panel on the top.

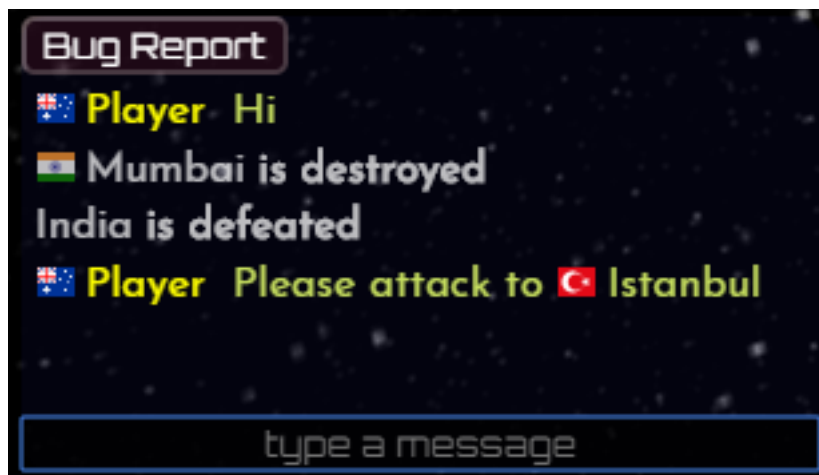

-

Missile Tracking

- You can see inbound or outbound missiles from the monitoring panel. By clicking on the Departure/Arrival time, you can focus on the missile.
- By clicking on a city, you can see the inbound / outbound missiles on the control panel.

Typing a message

- By clicking on the message box on the chat panel, you can type a message.
- By clicking Enter, you can start typing a message.

Moves

- Change locations of cities – move (swap) : 1 minute (Changes the assets in the cities.)

- Launch Nuclear Missile – Reload : 100 seconds (Missile can be launched to an enemy city which has not been bombed.)
- Build (Nuclear Launcher or Air Defense): 80 seconds (Must be a civilian city)
- Repair City: 20 seconds (City must have been bombed)

Types of Cities

Civilian City: Nuclear Launcher or Air Defense can be built in this city.

Command Center: If this city is bombed, the game is lost.

Nuclear Launcher: Bombs can be released from this city to enemy cities.

Air Defense: Protects your cities by shooting inbound enemy missiles.

Rules

- Played with multiple players or bots. It is a time-based game of strategy.
- Countries have 5 cities.
- Countries start with 1 command center and 1 nuclear weapon.
- If the command center is bombed, the game is lost.
- All countries are enemies.
- The country that survives, wins the game.
- If the nuclear weapon is bombed, it is mandatory to build a new one.
- A nuclear weapon launched farther away will destroy the target in more time.
- The command center and nuclear weapon can be transported in every turn. A nuked location cannot be chosen.
- New nuclear weapon and air defense can be built.

Bot (Artificial intelligence)

It is an artificial intelligence that constantly attacks.

Attack -> Build nuclear launcher if non-existent and available

Attack -> Choose enemy (randomly from those with the least cities)

Attack -> Randomly launch a missile to any enemy city that hasn't been bombed.

End of the game message:

If this war had taken place in real life, we would have lost the entire world due to radiation and nuclear winter...
